Monthly Usage	What Happen To Your Bills	Impact notes
Below 600 kWh (~Under RM230)	No Increase (Likely Lower)	Minimal use of electricity means you get to be fully protected by the government's social safety net.
601 kWh to 1000 kWh (~RM 230 to ~RM 450)	Stable Or Reduce	The Energy Efficiency Incentive pretty much offsets the impact of AFA, giving discounts of up to 25 sen/kWh. Optimising your energy consumption would bring higher discounts.
Above 1,000 kWh (~RM450 to RM850)	Slightly Higher Base	Expect a moderate to high increase in base due to AFA. Your bill depends strictly on how long you run high-consumption items like air conditioners. You'll benefit greatly from reducing the total energy consumption from the grid.
Above 1,500 kWh (>RM850)	Premium Rates	The flat Energy Charge increases to 37 sen/kWh. AFA will increase this to even higher. Start using your energy efficiently might help, but the best course to action is to adopt solar/battery to reduce your overall pull from grid.
